PROFILE

AI engineer and frontend developer. I build products where an LLM does real work: voice agents with tool calling, speech-to-text pipelines and Telegram bots, wrapped in fast, responsive interfaces built with Next.js and React. I take projects from idea to a deployed application, including a production website that a real client uses today.

SKILLS

AI	LLM agents & function calling (Groq, Gemini, OpenAI-compatible APIs), Whisper / faster-whisper speech-to-text, prompt design, text-to-speech
Frontend	Next.js, React, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5 / CSS3, Three.js, responsive design
Backend & data	Python, Node.js, Prisma ORM, SQLite, REST API integration, Telegram bots
Tools	Git & GitHub, pytest, VS Code, VPS / Vercel deployment, GitHub Pages
Languages	Uzbek (native), Russian, English (A2)

PROJECTS

Angren City Technical College No. 4 — Official Site

angren-texnikum.uz

Client project

Trilingual (UZ/RU/EN) institutional website built with Next.js, Prisma and NextAuth. Online admission system, a complete admin dashboard (programs, staff, news) and automated Telegram notifications. Running live on a VPS.

Uzbek Voice Agent

[Code](#)

AI · Python

Windows voice assistant that understands Uzbek. Speech is transcribed offline with a fine-tuned Whisper model, then an LLM agent with tool calling opens apps, controls volume and media, sends Telegram messages and answers out loud. Two LLM providers with automatic fallback.

Audio → Notes

[Code](#)

AI · Next.js

Record or upload audio and get a transcript plus structured notes (summary, key points, action items) in Uzbek, Russian or English. Long files are split in the browser, so recordings of any length work on serverless hosting.

Forex News Bot

[Code](#)

Python · Telegram

24/7 Telegram bot for high-impact US economic releases: reminders before each event and the actual figure against the forecast, plus crypto price and news alerts. Duplicate-safe state, retries and a pytest suite.

City Library Platform

[Code](#)

Next.js · TypeScript

Library website with a searchable catalog and online membership applications, plus a staff admin panel protected by HMAC-signed sessions and login rate limiting.

YouTube Clone · StreamVibe

[YouTube demo](#)

[StreamVibe demo](#)

React · JavaScript

Two frontend apps on live data: a YouTube-style SPA (React, Vite) with search, a watch page, comments and history, and a streaming UI in vanilla JavaScript on the TVMaze API.

EDUCATION

Frontend Development Course

2025 – 2026

Shanghai School
